

[Early Careers Programme – Engineering at LSEG](#)

Build Tech That Powers Global Financial Markets

Are you curious about how technology drives the world's financial markets?
Do you want to work on real products, solve meaningful problems, and learn from people who are shaping the future of financial technology?

At LSEG, our **Early Careers Programme** is designed to help you move from campus to career with confidence. It is a 12-month learning journey where you will gain hands-on experience, build future-ready skills, and contribute to work that matters globally.

This is more than just your first job — it is your launchpad into a career in engineering, technology, data, and innovation.

About the Programme

Our **Early Careers Programme** gives you the opportunity to learn, contribute, and grow in a global organisation that sits at the heart of financial markets.

During the programme, you will:

- ✓ Work on **live business projects** that create real impact
- ✓ Build technical and professional skills through structured learning
- ✓ Learn from experienced engineers, mentors, and industry experts
- ✓ Collaborate with global teams and early career talent across locations
- ✓ Gain exposure to modern technologies, agile ways of working, and product-based engineering
- ✓ Take part in group projects connected to LSEG's sustainability goals
- ✓ Earn industry-recognised certifications
- ✓ Contribute to society through volunteering and CSR initiatives

Please note, the position is full time employment with LSEG.

Who Can Apply?

We are looking for students who are excited to learn, build, solve problems, and grow with us.

Eligibility Criteria

You should be:

- A final-year undergraduate or master's student graduating by **August 2027**

- Pursuing one of the following degrees:
 - **BE / BTech in CS, IS, IT, ECE, AI & MCA**
- Maintaining a **minimum 7.5 CGPA** throughout academics — 10th, 12th, UG and/or PG
- Having **no active backlogs** at the time of application or onboarding

Why Join LSEG's Early Careers Programme?

This programme is built to help you start strong and grow with purpose.

You will get to:

- **Do real work from day one**
Work on live projects used by teams and customers across the world.
- **Learn beyond the classroom**
Build practical skills in engineering, data, platforms, cyber security, reliability, and financial technology.
- **Be mentored by experts**
Learn directly from professionals who bring deep technical and industry experience.
- **Build your global network**
Connect with peers, leaders, mentors, and early career talent across LSEG.
- **Grow with structure and support**
Receive learning opportunities, feedback, and guidance throughout the programme.
- **Make an impact beyond work**
Participate in sustainability projects, volunteering, and CSR initiatives.
- **Shape your long-term career**
Transition into a permanent role where your interests and business opportunities come together.

Engineering Career Pathways

Engineering at LSEG is about building, operating, improving, and protecting the platforms and products that power global financial markets.

You may get the opportunity to work across areas such as:

1. Product Engineering

Product Engineering teams build and improve the software, platforms, systems, and applications that support LSEG's products and services.

Areas within Product Engineering include:

- **Software & Platform Engineering**
 - Work on designing, building, testing, and improving software and infrastructure that support real business products.
- **Quality Engineering**
 - Help ensure our systems are reliable, usable, and aligned to business and customer needs by identifying gaps, improving requirements, and supporting robust delivery.
- **Reliability Engineering**
 - Focus on keeping platforms, applications, and services stable, available, and high-performing. This includes identifying risks, building tools, and helping teams recover quickly when issues occur.
- **Cyber Security**
 - Help protect LSEG's systems, networks, and data by understanding risks, supporting security controls, and embedding secure practices across the development lifecycle.

2. Service Engineering

Service Engineering focuses on keeping critical technology services running effectively, reliably, and consistently.

Areas within Service Engineering include:

- **Service Management**
 - Support the operational lifecycle of services, using industry best practices such as ITIL to ensure services meet business needs, governance standards, and regulatory expectations.
- **Service Operations**
 - Help monitor systems, respond to incidents, support recovery, and maintain high availability and performance across services.

3. Quantitative Analytics

Quantitative Analytics combines data, models, mathematics, and technology to solve complex business and financial problems.

Areas within Quantitative Analytics include:

- **Data Science**
 - Use statistical, analytical, and computational skills to build models, generate insights, and solve real-world problems using data.
- **Financial Engineering**
 - Apply mathematics, programming, and financial knowledge to develop models that help price, manage, and understand financial products and risks.

What We Are Looking For

At LSEG, we value not only **what you achieve**, but also **how you achieve it**.

We are looking for curious, collaborative, and driven individuals who want to build responsibly, learn continuously, and contribute with purpose.

Technically Curious and Courageous

You enjoy solving problems, learning new technologies, and building your technical skills.

You should have knowledge of at least one programming language such as:

- **Java**
- **C#**
- **Python**

Exposure to relational databases such as **Oracle, MS SQL, or PostgreSQL**, along with basic operating system and networking fundamentals, will be helpful.

Customer-Focused

- You are interested in understanding how your work impacts customers, users, and the wider business.
- You are curious about financial markets and want to contribute to better, faster, and more reliable customer experiences.

Responsible Builder

- You understand that technology should be built safely, securely, and thoughtfully.
- You are open to learning about risk, security, and compliance guidelines, and you raise blockers early so that teams can deliver effectively.

Ownership Mindset

- You take responsibility for your work, follow through on commitments, and ask for help when needed.
- You are reliable, open to feedback, and willing to contribute to a positive team environment.

Data-Led Thinking

- You are curious about data and enjoy using information to understand problems, explore options, and make better decisions.
- You are comfortable asking questions, analysing patterns, and learning how data can shape business outcomes.

Growth Mindset

- You are flexible, open-minded, and willing to learn from feedback.
- You are excited by change and ready to build new skills as technology, teams, and business needs evolve.

Collaboration and Communication

- You communicate clearly, listen actively, and enjoy working with others.
- You are able to share ideas, ask questions, build professional relationships, and collaborate across teams.

Your Career Starts Here

The LSEG Early Careers Programme is built for graduates who want to do meaningful work, learn continuously, and grow in a global technology environment.

If you are someone who wants to code, solve problems, work with data, protect systems, build reliable platforms, and make an impact — this programme is for you.

Launch your career. Build with purpose. Grow with LSEG.
