

Role: Associate - Patent Drafting/Searching/Licensing (Bangalore)

Company Profile:

Hourglass Research is a leading Intellectual Property services firm with offices in **San Jose, California and Bangalore, India**. The company provides **US Patent Drafting & Prosecution, Patent Analytics & Licensing** services to multinational companies and startups. We cater to the **hi-tech, semiconductor, telecom, software, emerging tech, medical devices, materials, and automotive** sectors. Over the past 13 years, Hourglass Research has been consistently chosen by Fortune 500 firms for their US patent drafting and analytics assignments.

Role Overview:

As an Associate, you will:

- work with some of the leading technology corporations and technology experts, assisting them in their innovation roadmap and MnA decisions
- work on some of the cutting-edge technologies and work together with technologists
- get an opportunity to **identify problems** and strive to resolve the same by **independent thinking**
- assist clients worldwide by delivering high quality competitive intelligence and strategic services

Job description (Patent Drafting):

- Attend patent review committee (PRC) meetings to evaluate inventions
- Conduct patent searches to assess patentability of inventions
- Prepare US patent applications
- Assist in patent prosecution activities to take patent applications to grant
- Client interaction: Participate in inventor calls from Day 1, communicate project highlights and summaries to clients via calls and e-mail
- Participate in devising IP strategies for clients

Job description (Patent Analytics & Licensing):

- Assist corporations in their licensing & analytics activities
- Conduct comprehensive searches and analysis of technical and patent information using online databases
- Analyze and rank-order patent portfolios, run campaigns to identify potential markets/standards, prepare high-quality licensing reports (patent-product mapping, damage calculation & royalty earning models, etc.)
- Occasionally involves product reverse engineering, chip testing, IEEE/ETSI standard scouting, product/data sheet analyses, etc.
- Interact directly with technology experts on a day-to-day basis
- Prepare ready-to-use licensing decks

Desired Skillset:

- Ability to quickly understand and grasp complex/cutting-edge technologies within hi-tech including VLSI, Semiconductor, Emerging Technology (EVs, AI, ML, blockchain, deeptech, etc.), Telecom (LTE/4G and beyond)
- Excellent written and verbal communication (an absolute must)
- Desire to deliver the best work product within set timelines
- Ability to think independently and in a team to understand problems & suggest solutions

Education: Bachelor's degree in Electrical, Electronics, Computer Science
