

Graduate Software Engineer Intern

Graduate Software Engineer Intern · On-Job-Training · Neoveda Technologies · Dehradun (on site)

About the role

We are hiring GSE Interns to join our engineering team in Dehradun. This is a three month, paid, on-the-job training where you work on our live products alongside our engineers, not on practice assignments. Strong performers are offered a full time role as an SDE 1 at the end of the OJT.

What you will do

Your work will depend on your strengths. Depending on your area, you could:

- Build features for our web products, front to back, using React, Next.js, Node and PostgreSQL.
- Build AI agents and the systems behind our assessments, using Python and large language model APIs.
- Build data pipelines that organise skills and roles, using Python and SQL.
- Build automated testing and assessment integrity tools for our coding platform.
- Design and build product interfaces that are clean and easy to use.

You will be given real tasks from your first week, with a mentor to guide you.

How you will grow

- **Month 1:** You learn our codebase and ship your first changes.
- **Month 2:** You take ownership of a feature, with support from your mentor.
- **Month 3:** You work at the level of a full time engineer.
- Throughout, we identify your skill gaps and give you a personalised learning plan with technical content from Skillssoft, plus one on one mentoring from our founders and senior engineers.

What we are looking for

- You are completing a degree in Computer Science, IT or a related field.
- You can show that you build things: internships, personal or freelance projects, open source work, or certifications.
- You know at least one programming language well and you learn quickly.
- You have clear academic standing, with no active backlogs or pending supplementary papers.

We hire on demonstrated skill, not on marks alone. A strong portfolio matters more to us than a high CGPA.

What we offer

- A stipend of ₹15,000 per month during the internship.
- On conversion to SDE 1, a full time salary of ₹ 5 to 8 LPA.
- Personalised technical training through Skillssoft and direct mentoring from the founding team.
- An on site role in Dehradun, with clean air and a calm working environment in the Himalayan foothills.

About Neoveda

Neoveda Technologies Pvt Ltd is an India-based product engineering and services company. We design, build and run intelligent products used in hiring, assessment and skill development, the kind of work where applied AI meets real engineering. We also help enterprises find, contract or hire the right talent in the market.
