

NEOVEDA TECHNOLOGIES CAMPUS HIRING PROGRAM 2027

1. About Neoveda

Neoveda Technologies Pvt Ltd is an India-based product engineering and services company. We design, build and run intelligent products used in hiring, assessment and skill development, the kind of work where applied AI meets real engineering. We also help enterprises find, contract or hire the right talent in the market.

Our teams work across full-stack development, applied AI and large language models, data engineering and cloud infrastructure. We are based in Dehradun and hire early-career engineers directly into live product teams, because we believe strong engineers are built on real work, not classroom theory alone.

2. What this means for your students

We hire early-career engineers into real roles and put them through structured On-the-Job Training (OJT) on live products, mentored by working engineers. This will be an on-site OJT at our Dehradun office. Students will be paid stipend of INR 15,000 per month and based on their performance and learning ability in the 3 months, they convert to full-time roles. Our current salary band for entry-level software engineers is between 5 to 8 LPA.

We invest directly in each student through the OJT. Every student's skill gaps are mapped and matched to world-class technical training content like Coursera, Skillsoft etc. Neoveda bears the content subscription costs for all OJTs. Their learning is tracked against real performance on the job, so growth is measured by what they can now do, not by hours logged.

3. How we hire: skills, not marks

Our entire drive is skills-based. We do not select on CGPA, college tier or degree alone. As a baseline eligibility requirement, students must have a clear academic standing, those with active backlogs or pending supplementary papers cannot appear for the drive. We look for evidence that a student can actually do the work: internships, freelance or personal projects, certificates, and live performance under proctored conditions. A student with a strong portfolio and an average transcript is exactly who we are looking for. The best way your students can prepare is to build and show real work.

4. What we look for in a student

Technical skills we look for	Behavioral traits we value
Programming: Python, JavaScript / TypeScript Web & frameworks: React, HTML / CSS, REST APIs AI & LLMs: Prompt engineering, OpenAI / Claude APIs, basics of embeddings Data & databases: SQL, PostgreSQL or MongoDB (basics) Tools: Git & GitHub, basic Docker, comfort on Linux	Learns fast - Picks up new tools without being spoon-fed. Honest - Says 'I don't know yet' instead of bluffing. Takes ownership - Finishes what they start, owns mistakes. Communicates clearly - Can explain their work in simple words. Builds with AI - Treats AI as a teammate, not a way to cheat. Coachable - Takes feedback and improves quickly.

5. How the placement drive runs

You share the expected number of participants with us in advance, and we size the drive to fit, a single day for most campuses, or two days where large numbers appear (for example, 400–500 students). The drive runs in three phases.

Phase 1. Preparation *starts 3-5 working days before the drive*

- **Register on the platform (mandatory)** - Every student appearing must register and complete their profile on Knovia, our screening and assessment platform, at least 3 working days before the campus day. The profile is where they add their resume, project links, certificates and internships. Students who have not completed their profile by the campus day will not appear in the drive. Completing the profile on time is the first thing we look at, it tells us a student is serious.
- **The placement office's role** - We share the registration link and a simple checklist with your team, and send regular updates on who has not yet completed so you can follow up. Your office confirms the list of students appearing and drives profile completion before the 3-day cutoff.
- **Confirm logistics** - We finalise the headcount of completed profiles, the number of drive days, and the computer lab, seating and internet connectivity the college will provide for the proctored assessment.

Phase 2. Campus hiring day(s) *three rounds, all conducted on site*

- **Round 1, Skills screening, 30 mins** - We screen students on evidence of real skill: internships, freelance and non-academic projects, and certificates, the artifacts that prove they can do what we hire for. Students who clear this move straight into a proctored skills check.
- **Round 2, Assessment, 60 mins** - A proctored online assessment on Knovia: 30 minutes of knowledge-based questions followed by 30 minutes of application-based, interactive tests.
- **Round 3, Personal interviews** - Face-to-face interviews conducted in person by Neoveda team.

Phase 3. After the drive

- **OJT offer** - Students receive an OJT offer on live product teams, with a stipend and mentorship.
- **Learning and development** - Each student's mapped skill gaps are matched to personalised technical training content, paired with 1-on-1 mentoring from Neoveda's founders and executive leaders. Progress is tracked against real performance on the job, measured by outcomes, not hours.
- **Conversion** - Students who complete their OJT as a high performer and a learner, convert to full-time engineering roles at Neoveda.
- **Reporting** - Your office receives a clear report each cycle, who was assessed, skill gap analysis, batch analytics.
