

Software Development Intern (Frontend)

About the Role

We are looking for passionate and motivated **Frontend Development Interns** to join our engineering team. As an intern, you will work alongside experienced engineers to build, maintain, and enhance modern web applications using **Angular 18**, **TypeScript**, and **Signals**.

This role offers hands-on experience with enterprise-scale applications, modern frontend architecture, and the complete software development lifecycle. You will also gain exposure to how frontend engineering supports product launches and customer experience.

Key Responsibilities

- Develop responsive, reusable, and high-quality UI components using **Angular 18**.
- Build applications using Angular Signals, RxJS, and modern Angular best practices.
- Collaborate with designers, product managers, and senior engineers to deliver intuitive user experiences.
- Integrate frontend applications with REST APIs and backend services.
- Debug issues, optimize application performance, and improve code quality.
- Use **Claude Code** to accelerate development, debugging, testing, and documentation while validating the generated code for correctness and quality.
- Participate in code reviews and follow best practices for maintainability and scalability.
- Learn and adopt new frameworks, libraries, and engineering tools as required.

Required Skills

- Good understanding of **HTML5**, **CSS3**, **JavaScript (ES6+)**, and **TypeScript**.
- Familiarity with **Angular** or **React**, including components, routing, services, and state management.
- Basic understanding of **Angular Signals** or modern Angular reactive programming.
- Basic understanding of REST APIs and JSON.
- Interest in building responsive and user-friendly web applications.
- Strong analytical and problem-solving skills.
- Good communication and collaboration skills.
- Comfortable using **Claude Code** as part of the daily development workflow.

Good to Have

- Experience with **Angular Material**, Bootstrap, or Tailwind CSS.
- Knowledge of **RxJS**, **Angular Signals**, and state management concepts.
- Understanding of Git and version control workflows.
- Exposure to backend technologies such as **Java**, **Node.js**, or **Python**.
- Familiarity with unit testing frameworks such as **Jasmine** or **Karma**.
- Basic understanding of A/B testing, conversion optimization, or marketing funnels.

What You'll Learn

During the internship, you will gain practical experience in:

- Enterprise-scale Angular application development
- Angular Signals, RxJS, and modern reactive programming
- Modern frontend architecture and reusable component design
- API integration and asynchronous programming
- Code quality, linting, testing, CI/CD, and deployment workflows
- Agile software development practices
- Performance optimization and debugging techniques
- Building scalable, maintainable, and production-ready applications
- Effective use of **Claude Code** in professional frontend development
- Understanding how frontend engineering contributes to customer experience, product launches, and business outcomes

Preferred Candidate Profile

We're looking for candidates who:

- Are passionate about frontend development and modern web technologies.
- Enjoy solving real-world engineering problems.
- Have a strong learning mindset and take ownership of their work.
- Are comfortable working with modern engineering tools, including **Claude Code**.
- Can collaborate effectively in a fast-paced engineering environment.

Technologies You'll Work With

- Angular 18
- Angular Signals
- TypeScript
- HTML5 & CSS3
- RxJS
- REST APIs
- Git
- Angular Material
- Claude Code
- CI/CD and modern engineering workflows
