

Software Development Intern: Job Description

About DataGrokr

DataGrokr (www.datagrokr.co) is a cloud native technology consulting organization providing the next generation of data management, cloud and enterprise solutions. We solve complex technology problems for our global clients who rely on us for our deep technical knowledge and delivery excellence.

If you are unafraid of technology, believe in your learning ability and are looking to work amongst smart, driven colleagues whom you can look up to and learn from, you might want to check us out.

About the Role

We are looking for energetic interns to join our software development team. As a member of this team, you will:

- Collaborate with the development team to design, develop, and implement software solutions.
- Gain practical experience in different cloud platforms (AWS/Azure/GCP) and delve deep into the various Cloud services.
- Assist in implementing DevOps practices to streamline software development and deployment processes.
- Develop and maintain Python scripts and applications for various purposes.
- Utilize SQL for database management and data manipulation tasks.
- Gain experience in building ETL pipelines, large scale data platforms, data warehouses and data lakes in on premises and cloud.
- Work on real-life projects and have independent deliverables that you will be responsible for.
- Work with extremely talented peers and follow modern engineering practices using agile methodologies.
- Prepare your career for becoming a battle-hardened software professional.

Educational qualification:

- Graduation in Engineering or MCA.

Must-have skills and attitudes:

- Passion for software development and interest to work in cloud engineering and data engineering projects.
- Proficiency in Python programming language.
- Good knowledge of SQL and database management systems.
- Excellent problem-solving skills and a passion for learning new technologies.
- Strong communication and collaboration skills.
- Can-do attitude and take pride in your work.
- Desire to develop leadership skills.

Desired Skills:

- Good understanding of cloud computing concepts and experience with at least one cloudplatform (e.g., AWS, Azure, Google Cloud).
- Familiarity with DevOps principles and knowledge of relevant tools (e.g., Docker, Kubernetes,Jenkins).
- Experience with version control systems, particularly Git.
- Knowledge of software testing practices and tools.
- Knowledge of Artificial Intelligence, Large Language Models (LLMs), and hands-on experience with AI tools is a strong plus.

Other Details:

Location: The internship will be in Bangalore DataGrokr office premises. Before the internship starts you will have to relocate to Bangalore, if you are not in Bangalore.

Stipend during Internship: Rs. 20,000 per month

Conversion to Full Time: Candidates who successfully complete their internship and meet Company expectations will be awarded Full-Time offers. Post the internship, they could be placed in Data Engineering or Cloud Engineering projects based on organization needs and their proficiencies.

They should be open to work on any of these projects.

Our starting pay package for full-time developers is **6 LPA** with industry competitive benefits.

Recruitment Process:

- **Step 1: Online Test/ Assignments:** As a part of our selection process, our first step is a Online exam, which consists of MCQs and coding. We will provide detailed instructions on what you need to do as well as the deliverables expected.
- **Step 2: Technical interviews:** Based on the submissions, we will shortlist some candidates and schedule interviews with them. The interview will focus on the Test as well as your technical knowledge and problem-solving skills.
- **Step 3: Management interview:** Based on the performance in the technical interview, some candidates will be shortlisted for management interview. The interview will focus on your overall readiness for a career in the industry and fit with DataGrokr values/expectations
